

Netpet CMS Quick-Setup

NETPET-cms
OPEN SOURCE CONTENT MANAGEMENT SYSTEM

1. Upload your files via ftp to your server into your desired folder
2. Surf via your Browser to the the directory you have put in your Netpet (e.x. <http://www.yourdomain.com/> or <http://www.yourdomain.com/subfolder>)
3. The Installation will start.
4. First of all you will see a list of folders and files that have to be writeable. If you have a unix/linux based server you can do this via you FTP-Program. If you have a windows server you can do this via your administration panel. If you have problems with setting the needed files writeable, please contact your provider or administrator.
5. If the needed files are writeable you can proceed to the Config Settings screen.
6. Please fill in the form correctly to make sure you Netpet CMS will work correctly
7. If you have an apache server and your mod_rewrite module is activated you an check the "Enable Mod-Rewrite" box to have search-engine friendly links (If you don't know whether your server has or has not activated "mod_rewrite" leave this box unchecked, you can change this later anyway)
8. You Installation should be complete. If you have made any mistakes, or the system isn't running correctly, please check your "config.php" file in the "netpet" folder. For more detailed setup or "mod_rewrite" activation check your "config.php" or download the "Setup Manual" from <http://www.netpet.at/en>

Have fun
